

SAFE Q AUDIT from Qultivator is an audit tool that ensures the safe Covid-19 protocols and follows the guidelines from WHO regarding Covid-19 outbreak.

SAFE Q AUDIT tool measures the Covid-19 process of work continuously - quality and safety.

- Ensures a safe environment for clients and employees
- Continuously measures quality based on predetermined requirements
- A management tool
- Identifies deficiencies
- Impact on the quality of cleaning & safety directly
- Creates transparency at all levels

A Self-Audit to ensure that internal processes are followed and that all employees possess the correct knowledge and skills. Internal hygiene & safety processes to minimize the transmission of infections.

The gap between internal processes and SAFE Q AUDIT displays the deficiencies where data is aggregated is the key to detect deviations in quality and enables the right actions. The result will be a dashboard for priorities and actions.

Safe Q is a tool that we alone have on the Scandinavian market. In July we implemented the system on the Swedish market and are now able to deliver reports to every hotel in Sweden, follow the progress and get statistical information over time. It is also valuable to mention that we've had a couple of customers calling, wanting to know what we do to secure our hotels and provide a safe environment for their employees. They were most impressed and told us they have not heard of anything like it from any of our competitors.

We will in august implement the system in the remaining hotels in Scandinavia, and we're sure that it will give us an advantage when the business picks up again.

About Qultivator

Customer Quality Intelligence (CQI) for service industries

- Background from hospitality and retail with efficiency- and quality assurance
- Offers a customer quality intelligence platform to enable forward thinking organisations to collect and act on real time quality data
- Creates a powerful contextual and detailed feedback loop from quality audits and customers to improve customer experience and profitability
